

Ashik Ahmmed Shuvo

Senior Software Engineer | Full-Stack TypeScript (Vue/Nuxt, React/Next.js, NestJS) | LLM Integration

Dhaka, Bangladesh | +880 1730959501 | ashikshuvo1996@gmail.com
linkedin.com/in/ashik-ahmmed-shuvo-280646140 | github.com/AshikShuvo

Summary

Senior Software Engineer with 6 years of experience building production web platforms for international clients, including the online ordering portal for Norway's largest pizza chain (80+ restaurants) and an IoT device-monitoring platform. Ships full-stack TypeScript end to end: Vue 3/Nuxt 3 and React/Next.js front ends, NestJS + PostgreSQL/Prisma APIs, Redis job queues, Docker and GitHub Actions CI. Integrates LLMs (OpenAI vision, Google Gemini) into asynchronous product workflows and works AI-natively, using custom Cursor agents, rule sets and spec-driven context docs to deliver well-tested features (Jest, Vitest, Playwright). Growing toward Staff-level ownership of cross-stack architecture.

Skills

Languages	TypeScript, JavaScript, HTML5, CSS3/SCSS, SQL (PostgreSQL), C++
Front-end	Vue 3 (Composition API), Nuxt 3, Pinia, Vuex, PrimeVue, React 19, Next.js (App Router), Redux Toolkit, Zustand, TanStack Query, React Hook Form + Zod, Tailwind CSS, shadcn/ui, Radix, i18n (next-intl, Nuxt i18n), SSR/SSG/ISR, Vite
Back-end & Data	NestJS, Node.js/Express, REST, OpenAPI/Swagger, Prisma, PostgreSQL, MongoDB, Redis/Bull queues
Auth & Security	JWT access/refresh tokens, OAuth 2.0 (Google, Facebook, GitHub) with Passport, Auth.js/NextAuth, Microsoft MSAL, Vipps, SMS OTP, RBAC/ACL design
AI / LLM	OpenAI API (vision), Gemini API, prompt templating, async LLM job pipelines; AI-assisted development with Cursor (custom agents, rules, spec-driven context)
Testing	Jest, Supertest, Vitest, React Testing Library, Playwright (page-object model)
Cloud & DevOps	AWS Amplify, Docker, Docker Compose, GitHub Actions CI/CD, Render, Railway, Vercel, Turborepo, pnpm/Bun workspaces, Cloudinary, Firebase Analytics, Sentry, Git
Practices	Modular-monolith design, architecture docs & runbooks, epic/story/task decomposition, code review, mentoring
Spoken Languages	Bengali (native), English (professional)

Experience

Brain Station 23	Dhaka, Bangladesh
<i>Senior Software Engineer</i>	<i>Dec 2021 – Present</i>

- Lead front-end architecture for enterprise web applications for international clients (Norway's largest pizza chain, an IoT device-management platform) using Vue 3/Nuxt 3, React and TypeScript, with AWS Amplify for real-time features. Cut page load times by 40% through SSR/SSG, lazy loading, image optimization, caching and Gzip/Brotli compression.
- Designed a reusable component and composable library (Vue composables, React hooks) adopted across multiple projects, reducing build time for subsequent projects by about 40%.
- Owned authentication and payment integration for a high-traffic e-commerce portal: Vipps login, SMS OTP and Microsoft MSAL for personal and business accounts with role-based access, plus Vipps, card and invoice payments.
- Drove TypeScript adoption across front-end codebases, contributing to a 25% reduction in user-reported interface issues.
- Raised engineering quality through code reviews and mentoring engineers, contributing to a 30% reduction in bug reports.

Peppes Pizza Customer Portal <i>Vue 3, Nuxt 3, TypeScript, PrimeVue, Tailwind CSS</i>	live.peppes.no
--	----------------

- Architected the SSR/SSG ordering platform for Norway's largest pizza chain (80+ restaurants, 4M+ pizzas a year): menu, product customization, deals and multi-step checkout with validation.
- Built the identity layer with Vipps, SMS OTP and Microsoft MSAL for personal and business accounts, including role-based access and department-based requisition ordering.
- Integrated payments (Vipps, card, invoice), Google Maps geolocation and restaurant selection, Norwegian/English i18n, and Firebase Analytics + Sentry with GDPR-compliant consent.

- Designed a scalable Vue 3 front-end architecture with shared layouts and composables, reducing template duplication.
- Delivered real-time administrator notifications via AWS Amplify, plus a background-sync data layer that keeps device status in the Vuex store current without manual refresh.
- Built a responsive web and mobile UI for monitoring devices.

Neural Semiconductor Ltd

Dhaka, Bangladesh

*Associate Software Engineer**Sep 2020 – Nov 2021*

- Developed enterprise applications, including an HRM system and a semiconductor Trade-Off Calculator, with React/Redux and Vue/Vuex, streamlining internal workflows and improving operational efficiency by about 15%.
- Built data-visualization tools showing microcircuit performance across scenarios, combining complex back-end queries with client-side caching to speed up data retrieval and display by about 20%.
- Implemented authenticated public/private routing and role-based authorization in the HRM front end using React Router.
- Architected modular UI components for the admin panel and complex layouts, cutting feature development time by about 25%.

Selected Projects

AI Content Generator

github.com/AshikShuvo/ai-content-generator*NestJS, React 19, Gemini API, Redis/Bull, MongoDB/Prisma, Docker, GitHub Actions*

- Full-stack SaaS that generates blog outlines, product descriptions and social captions with Google Gemini through a delayed Redis/Bull job queue, with live job-status tracking, prompt templates and model fallback; JWT auth, containerized and CI-deployed.

Spice-me – Multi-Restaurant Ordering Platform

private repo, available on request

NestJS, Next.js 16, PostgreSQL/Prisma, Auth.js, Playwright, Render

- Restaurant platform with public menu (ISR), cart and checkout, order history, admin order management, kitchen display system, table reservations, VAT/currency settings and a sales-insights dashboard; 27 Playwright E2E specs plus Jest/Vitest unit tests.
- Built with an AI-native workflow: custom Cursor sub-agents, always-on coding-standard rules and a living feature-context protocol that agents read before and update after every change.

Calorie Tracker API with AI Food Recognition

github.com/AshikShuvo/cal-track-be*NestJS, OpenAI Vision, PostgreSQL/Prisma, Passport, Jest*

- REST API that estimates nutrition from meal photos with an OpenAI vision model, with Google/Facebook OAuth, hierarchical RBAC, daily/monthly/yearly reports and about 97 unit tests.

Admission Agency Management System

github.com/AshikShuvo/admission_agency*Turborepo, NestJS, Next.js, PostgreSQL/Prisma, Zod, Vitest*

- Modular-monolith ERP for a study-abroad agency built spec-first (business flows, 12 modules, epics, stories and tasks) with an agent map that routes work to front-end, back-end and QA agents; role-based ACL enforced end to end.

Education

East West University

Dhaka, Bangladesh

*B.Sc. in Computer Science and Engineering | CGPA 3.43/4.00**Jan 2016 – Apr 2020*

- Undergraduate thesis: optimized K-means clustering with Particle Swarm Optimization (PSO) to improve centroid selection and clustering performance; supervised by Dr. Md. Mozammel Huq Azad Khan.
- Dean's List, East West University (2018).
